

GIS/Mapping Support Opportunity for Watershed Groups

Columbia Basin Trust in partnership with the Selkirk Geospatial Research Centre will be providing an opportunity for Columbia Basin Watershed Network groups to receive GIS/mapping support from Selkirk Geospatial Research Center. This work could include but is not limited to: assembling GIS data for use in GIS/Google Earth, GPS surveying, producing paper or digital map products and 3D visualizations, providing GIS or remote sensing analyses and conducting training on GIS, GPS and internet map resources. Watershed groups would be expected to work collaboratively with CBT and SGRC to identify the scope of the project and associated deliverables.

If your watershed group is interested in participating please express your interest by completing the following questions. Preference will be given to watershed groups that have not previously received GIS/mapping support from Selkirk College. Please use additional space if necessary.

1. Name of watershed group and contact information:
2. Is your watershed group a member of the Columbia Basin Watershed Network?
3. Please provide a brief description of the GIS/mapping support your watershed group requires and the project scope. Specific details on objectives and expected outcomes should also be included.
4. Please indicate the preferred timelines of having the GIS/mapping work completed.

Columbia Basin Trust is accepting Letters of Interest until **June 7th, 2010**. Successful applicants will be notified by **June 11th, 2010**. Projects that are not accepted this year may be able to access support in the future through this partnership.

Please return your Letter of Interest via e-mail to:

Karen Nickurak
Columbia Basin Watershed Network Coordinator
